

# CONNECTED TO TOMORROW

## CONNECTED TO INNOVATION

The Pittsburgh region is a leader of innovation, with thriving energy, advanced manufacturing, and automation sectors growing exponentially faster than other parts of the U.S. As Pittsburgh's neighbor to the east, North Huntingdon is no stranger to these sectors. The Township continues to cultivate a sustainable community for businesses to grow, develop, and invest in the future, including a number of international and high-tech businesses.

## CONNECTED TO INVESTMENT

North Huntingdon Township has been working on developing and improving its technological capabilities to create efficiencies and stay ahead of the municipal technological curve.

The Township built a new, interactive website, broadcasts live streams of meetings, and created a paperless processing system. An advanced road assessment software system developed by Carnegie Mellon University and Roadbotics, which can conduct road surveys through a mobile application, has also been implemented by the Township. This new software system saves time and allows for efficient road analysis.

North Huntingdon prides itself on developing and investing in its underdeveloped areas. North Huntingdon offers financial incentives for businesses to develop underutilized areas through LERTA and other financial incentive programs.
